

Elder Safety & Well-Being Lab

This new series addresses a range of elder safety challenges including intervention and de-escalation, problem solving, trauma informed care, and caregiver burnout. Identify best practices for successful outcomes through a range of experiences – build understanding, enhance communication skills, and develop resources.

Problem Solving

RECOGNIZE signs of burnout, follow the risks to both the caregiver and patient, and identify support resources. During lab, experience patient helplessness as they live with chronic pain and early stage dementia.

Trauma Informed Care

IDENTIFY best practices for supporting older adults with a history of trauma by embodying a veteran with PTSD. Experience flashbacks and staff interventions that promote self-regulation and preserve dignity.

Caregiver Burnout

LEARN best practices for successful conflict resolution by prioritizing elder safety and maintaining professionalism. Most importantly, experience intense verbal exchanges and respond to a potentially abusive incident.

IMMERSIVE TRAINING POSITIVE IMPACTS

75% Greater retention of information

Increased confidence in job performance **275%**

4x Faster learning

NEW

Branch Narratives

We are excited to announce that all new labs, including this one, incorporate branching narratives – enabling users to **select a response** to the given situation, leading to different outcomes for **higher learner engagement** and retention.

Who We Are

Embodied Labs is the gold standard for immersive training and experiential education for caregivers and medical professionals. Through immersive 3D content, our labs provide a first-person perspective on age-related experiences like vision and hearing loss, Alzheimer's, and end-of-life conversations. Use Embodied Labs to give your staff and students the perspective they need to provide high-quality, empathetic care for older adults.
